

HOLTEC®

Now you don't have to compromise quality for price. Our Transcut® II Station will cleanly cut through a package of hardwood or softwood lumber in about a minute, and with an accuracy of +/-1/16".*

Using conventional .404" chain, our system is affordable for any manufacturer whose needs demand more than a portable saw, but less than the capabilities of our automated systems.

We've priced it low, but equipped it with all the features you need to start processing your lumber quickly. Which makes it the perfect solution for your cutting needs.

SAFETY: A HOLTEC HALLMARK

The combination of HOLTEC's renowned engineering and safety standards raises the bar on production confidence, and produces something else... a safer working environment.
